

Git Repository Forensics Investigation Report

Case ID	GIT-CASE-7341C3FD
Repository Name	khil123890_web-vuln-scanner-v2_c19adfb1
Repository Path	C:\Users\Hp\Downloads\git-repository-forensics-tool-github-url\git-repository-forensics-to
Investigator	Ramya
Scan Date	2026-07-01 14:45:57
Active Branch	main

Repository Summary

Metric	Value
Total Commits Analyzed	1
Total Contributors	1
Total Findings	3
Suspicious Commits	1
Secrets Detected	0
Deleted Sensitive Files	0
High Risk Findings	2

Major Findings

Type	Severity	Score	Commit	File	Evidence
Large Code Deletion	High	70	4de18a1f7ab9		Commit deleted 2772 lines.
Many Files Modified	High	60	4de18a1f7ab9		Commit changed 17 files.
Outside Working Hours Commit	Medium	55	4de18a1f7ab9		Commit made outside normal working hours at hour 1.

Recommendations

1. Large Code Deletion: Review the deleted code carefully and verify that critical business or security logic was not removed.
2. Many Files Modified: Review the commit scope and confirm the change was approved and linked to a valid task.
3. Outside Working Hours Commit: Verify whether the commit time is expected for the developer or indicates unusual activity.

Conclusion

This report summarizes forensic indicators discovered from the Git repository history. Findings should be reviewed by the security team and repository owner. Critical and high-risk items such as exposed secrets, deleted sensitive files, and authentication logic changes should be prioritized.
